I cannot reproduce. I have tried to export in jpeg full size and 1600x1600.

Can you tell us the parameters used during export?

JPEG, full size, quality 85

I also tried export to PNG8 but got the same problem

I'm running darktable on AMD Athlon FX-8370E (8-core) and GeForce GTX 550 Ti

There are photos that are exported just fine and results are stable.

I can attach photo+xmp that do not reproduce this problem

Please try disabling OpenCL and see if it's still showing the problem.

BTW I do not observe any problems while working in darkroom mode

Are you exporting at the full size (max size = 0 x 0), or?

For what is worth my tests was done with OpenCL enabled.
