

darktable - Bug #11897

workflow difference between "crop and rotate" and "perspective correction"

12/31/2017 04:02 PM - dar ix

Status:	Closed: won't fix	Start date:	12/31/2017
Priority:	Low	Due date:	
Assignee:		% Done:	0%
Category:	Darkroom	Estimated time:	0.00 hour
Target version:	2.6.0	bitness:	64-bit
Affected Version:	git master branch	hardware architecture:	amd64/x86
System:	all		

Description

with the "crop and rotate" module you can double on the image to finish fiddling with the module.

the same doesn't work for the perspective correction module. given that the 2 modules do similar things, I think it would be good that double click also works for the 2nd module.

History

- Status changed from New to Closed: won't fix

- Category changed from Lighttable to Darkroom

I don't agree. Perspective correction in the "crop and rotate" module forces you to tell the module at some point that your horizontal/vertical adjustments are ready. The perspective correction module does automatic correction. There is no good justification to add a "commit" button.

#2 - 01/02/2018 11:47 AM - Tobias Ellinghaus

I guess what was asked for is double clicking to see the automatic crop applied.

#3 - 01/03/2018 03:07 PM - Roman Lebedev

- Target version set to 2.6.0
