Target version:	2.6.0	bitness:	64-bit
Affected Version:	2.4.0	hardware architecture:	amd64/x86
System:	Windows		

Description

I've been working on some RAW images in darktable 2.4.0 on Windows 10 the images were stored in C:\Users\Stuart\Pictures\Spotting Pics\2018\2018-01-26 MAN , I wanted to save them export them to C:\Users\Stuart\Pictures\Spotting Pics\2018\2018-01-26 MAN\mancavgeek\ , unfortunately, the program doubles all the backslashes, then failed silently, nothing was actually saved, and it took a while to figure out it was because it was trying to send them to C:\\\\Users\\Stuart\\Pictures\\Spotting Pics\\2018\\2018-01-26 MAN\\mancavgeek\\\$(FILE_NAME). Updated to 2.4.1 and tried again, this time the export actually worked, even though it was now trying to send to C:\Users\Stuart\Pictures\Spotting Pics\2018\2018-01-26 MAN\mancavgeek\\$(FILE_NAME). Oddly, the initial double backslash after the c: is now correct, it's just the rest. It's not an earth-shattering problem, as it is possible to manually alter the path, but it was confusing the first time it happened.

- Status changed from New to Closed: invalid

All is fine, the double \ are supposed to be there. A single \ is used for escaping in variables expansion.
