<b>Affected Version:</b>	2.4.0	<b>hardware architecture:</b>	amd64/x86
<b>System:</b>	other GNU/Linux		

#### Description

Hello,

I tried search function, seems my issue is new!?

I am running gentoo and the issue started with dt 2.4.0 (I remember my parallel installed GIT in /usr/local also showed this effect)

What happens is, there is no or changed reaction on my mouse wheel. Zooming in and out in the dark room I need to press ctrl. and sliders simply don't move at all.

When I restart dt everything is back to normal. Sometimes normal behavior comes back even without closing, just do something else for a moment (like filing this report). No unusual CPU behaviour

My system-information is attached as txt-file. Never saw this before, even I used git-hub version intensively prior x-mas 2017

Cheers  
Axel
