Results until ISO5000 look good, all above are overcorrected. Can you redo the shots >= ISO 6400 with a different scene?

Here are new ones for ISO 6400/8000/10000/12800.

What exactly makes a good noise profile picture (besides it having to be over- and underexposed)?

The comment on file "dt-noiseprofile-20180301_6400_8000_10000_12800.tar.gz" is somewhat misleading. It contains new images for ISO 6400-12800 as well. It's from the first (of 5) reshoots I did.
