Description

There may be a way to do this already, however, I cannot seem to find it mentioned in the manual. Please point me in the right direction if this already exists:

Say I have created a path mask in my image, but afterwards I realize that I need to add a few points to give me better control over it's shape in a particular location. I propose that using a modifier key, like "shift", and clicking allows the user to add a point to a path at the location of the click (this should only be allowed on the freeform "Path" tool, not circle, or ellipse.

The click must occur on the line of the path, if not then there is no effect.

History

#1 - 02/26/2018 08:08 PM - Kevin Ertel

This needs to be changed to "Feature" not bug. Sorry

#2 - 02/27/2018 11:39 AM - Tobias Ellinghaus

- Status changed from New to Closed: invalid

That is already possible using ctrl-click. It's also mentioned in the help message in the top toolbar.

I see it now, my mistake. Thanks very much!

#4 - 04/11/2018 08:56 PM - Roman Lebedev

- Target version set to 2.6.0
