

darktable - Bug #12255

Selecting a module through a keyboard shortcut collapses it

07/08/2018 06:59 PM - P G

Status:	Patch attached	Start date:	07/08/2018
Priority:	Low	Due date:	
Assignee:		% Done:	70%
Category:		Estimated time:	0.00 hour
Target version:		bitness:	64-bit
Affected Version:	git master branch	hardware architecture:	amd64/x86
System:	all		

Description

Steps to reproduce:

1. Set keyboard shortcuts for 2 modules in two different groups (tabs)
2. Select module 1. It expands
3. Select module 2. Tab is changed and module 2 expands
4. Select module 1 again. Tab is changed but as module 1 was already expanded within its tab, it is collapsed.

NB: this was tested with option "darkroom/ui/single_module" enabled.

In the proposed patch, I removed the "all_other_closed" variable from method imageop.c::dt_iop_gui_set_expanded, which I think is not needed anymore, but as my knowledge of the darktable code is limited it would be good to review this more closely.
