Description Hi, I recently bought a Canon M50 but it appears that Canon's cr3 raw format is not yet supported. I was wondering if this is due to be added in a future update? I have uploaded files in RAW and C-Raw format to https://raw.pixls.us/ if that helps.

Correct.

I was wondering if this is due to be added in a future update?

To the best of my knowledge, the details of that new raw compression format are still unknown. So until they are known, no decoder can be produced.

I'd recommend keeping shooting raws, storing them, but *in the mean time*, **temporarily** converting to dng and working on dng.

I have uploaded files in RAW and C-Raw format to <https://raw.pixls.us/> if that helps.

Thanks, there is already a full sample set there for that camera.
