Description

Button for toggle "soft proof" has no effect (except toggling visibility of "soft proof" in the bottom left corner if view)
Changing softproof profile to srgb/brg (for testing)/adobe/others has no visible effect.

changing "display profile" has visible effect regardless the "soft proof" is enabled or not - it's also strange behavior.

- Status changed from New to Closed: invalid

Sure no effect since sRGB or AdobeRGB are color space and not a printer profile.
