<b>Affected Version:</b>	2.4.4	<b>hardware architecture:</b>	amd64/x86
<b>System:</b>	openSUSE		

#### Description

I know darktable let us apply some "filters" by default, but in the case of lens correction, that depends on two values (manufacturer and model), it is possible to do that when we open a RAW file the lens correction for that lens were applied automatically?

Thank you

I second that. And what I find even more important is that you have the ability to update the lenscorrection database anytime. Non of my lenses are currently supportet in version one of lensfun although there is a new version out. Until now I found no possibility to manual update the database on a windows mashine, hence I am waiting impatiently for the next update of darktable.
