OSX mask brush feather scroll wheel issue

01/10/2019 11:31 PM - Roel Koster

Status:	New	Start date:	01/10/2019
Priority:	Low	Due date:	
Assignee:		% Done:	0%
Category:	Masks	Estimated time:	0.00 hour
Target version:	Candidate for next patch release	bitness:	64-bit
Affected Version:	git master branch	hardware architecture:	amd64/x86
System:	Mac OS X		

Description

when on osx, and trying to change the feathering when masking, shift scroll only INCREASES feathering. Up or down scrolling.. all result in expansion. normal sizing without shift works as expected

On my OSX with 2.6.0 installed, I cannot adjust the brush width smaller once I set a stroke.

- Text on screen says "scroll to set brush size" whenever cursor is inside brush dotted line area.
- Dotted line becomes bolder whenever cursor is inside brush dotted line area.
- Like this report, SHIFT+SCROLL will increase width of the brush stroke in both scroll directions (problem).
- Unlike this report, SCROLL without shift does not have any effect on brush stroke. I see "Working..." appear but no change occurs.
