Description

I just started darktable after the update to 0.7.1+782~gcd70148, and it attempts to start but fails to load a bunch of things, then reports an illegal instruction and the main window closes. Here's the Terminal output:

```

Here's an attempt at gleaning a little more info... I deleted "library.db" to try a fresh start, then ran Darktable. It opened as expected, with a clear light table. When I tried importing a film roll, it shut down. Here's the play-by-play:

I've now uninstalled/reinstalled Darktable and deleted library.db, and am still unable to use the software (the same crash happens as described earlier). Is there any way for me to get Darktable back again?

- *Status changed from New to Fixed*

Update: After the latest update (darktable 0.7.1+802~g4f9157c) the program is starting fine, and importing folders normally again. :-D
