#### Description

I have defined a preset for the highpass plugin that sets all values to 50%, activates the *blend* tick box and adds a 50% blend in *overlay* mode.

When manually applying this preset, it works as expected, but when I chose to auto-apply it to all images with an ISO rating of 3200, the *blend* check box is unchecked, leaving the images looking quite different from what I want them to be. :)
