

darktable - Bug #8676

import from camera doesn't rescan

04/24/2012 03:54 AM - xxvelcrar -

Status: Closed: upstream	Start date:
Priority: Low	Due date:
Assignee:	% Done: 0%
Category:	Estimated time: 0.00 hour
Target version: ---	
Affected Version: git development version	bitness: 64-bit
System:	hardware architecture: amd64/x86

Description

The Mass Storage Camera "import from camera" feature doesn't rescan the filesystem when removing / re-inserting a memory card.

steps to reproduce:

- 1) insert + mount memory card
- 2) press "scan for devices"
- 3) press "import from camera"
- 4) select some images
- 5) unmount + eject card
- 6) take some more photos
- 7) re-insert+mount memory card and do steps 2-3

expected outcome:

- 8) images taken in step 6 should be visible

actual outcome:

- 8) list of available photos is the same as step 4

boring details:

Running Darktable 1.0 (Debian version 1.0-2) importing from Nikon D80 using SD card reader built into a Thinkpad x220.

History

#1 - 08/10/2012 06:20 PM - Simon Spannagel

- Affected Version set to git development version

- Status changed from New to Closed: upstream

I'd guess this is a gphoto2 think. IMporting from camera is done using libgphoto. Please report this problem upstream.
