

Features under consideration

Here is a list of features that are being planned, developed or modified.

Import

- [Cfilmport](#) - also import from mass storage via import module

Export

- [WebPExport](#) - export to the WebP format

Capture

- [CameraTethering](#) - 2-Way camera tethering
- [ImageScanner](#) - Scan images into darktable

Lighttable

- [FeatureDetection](#) - (cluster images by histogram, colors, sharpness, faces/opencv, learn by star rating which features are considered good and autorate)
- [JobPriorities](#) - Making things work
- [CollectionPlugin](#) - easier and more general search
- [Tagging](#) - also tag description, title, and license (for picasa upload)
- [MetaData](#) - edit meta data for images (author, title, ')

Darkroom

- [WatermarkPlugin](#) - Rendering of SVG overlay - mostly done
- - [GrainPlugin](#) - - already done
- [OrganizeByProfile](#) - organize plugins guided by user profiles (scientist, artist, photography, simple, known universe..)
- [HighlightExposure](#) - mark over/underexposed pixels as an option
- [PfstoolsBackdoor](#) - dirty little commandline interface

Quality

- valgrind
- clang
- oprofile
- darktable -d perf also for other time critical things (disk io..?)
